Charging Juno

Begin charging Juno before first use. When the light on the left side of the device is red, the battery needs to be charged. You can use the device for about three hours once the battery is fully charged. The charging LED light will turn green when the battery is charged.

To charge Juno:

1. Insert the USB Type C cable into the USB-C slot on the left side of the device.

2. Attach the power adapter to the USB-C cable, and plug the power adapter into an electrical outlet. You can alternately insert the cable into a computer without using the adapter, but this charging method is slower.
3. Power on Juno by pressing the white Power button 🌇. You can work when the LED is solid red, which means that the battery is charging. However, you should leave it plugged in until the light turns green. The image on the following page is a view of the back and left sides of the device.

4. Begin using Juno. Go to the next section, “First Use.”
First Use

The first time you use Juno, you must follow these steps. You cannot exit once you start these steps and cannot use the device until you complete them. However, you can change these settings later if needed.

1. Plug in and power on Juno. See the previous section, “Charging Juno.”

2. On the Select Juno Voice, tap to select a female or male voice to narrate as you navigate Juno. Only English is available.

3. Tap the Next button. The Select Date screen is displayed.
4. Swipe up or down in each column and tap to select the month, day, and year. Tap the Previous button to return to the previous screen.

5. Tap the Next button. The Select Time screen is displayed.

6. Swipe up or down in each column and tap to select hours, minutes, and AM or PM.

7. Tap the Next button to complete the setup. The Live view is displayed. Refer to the Juno User Guide for step-by-step instructions.
# Hardware Buttons

See the *Juno User Guide* for more information about the hardware buttons.
