

Radio PSA Transcripts for COVID-19 Youth Vaccines

60-Second Version

I am _____ from _____.

The Pfizer COVID-19 vaccine is currently available for everyone age 12 and up across Indian Country. It is important for all eligible people to receive the vaccine to prevent the spread of COVID-19 in our communities.

The Pfizer vaccine is safe and effective for young people. Millions of youth have already been safely vaccinated, including thousands of Native youth.

Youth who have been vaccinated are highly protected against severe illness and death from COVID-19, and are much less likely to develop disease. Youth who are vaccinated are also much less likely to spread the disease to others.

Following vaccination, youth may experience soreness at injection site, fever, headache, muscle pain, or tiredness for a few days.

Our young people are key to stopping the spread of COVID-19 in our communities. The more people get the vaccine, the more lives we can save and the sooner we can get back to doing the things we love.

Call your healthcare provider or tribal health department to learn more about COVID-19 vaccines for youth.
