EXCHANGE LISTED FUNDS TRUST

xETFs TSLA Daily Income ETF

Summary Prospectus | March 30, 2026

Principal Listing Exchange for the Funds: NYSE Arca, Inc. | (Ticker Symbol: TYYY)

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at www.xETFs.com. You can also get this information at no cost by calling 888-668-8820, by sending an e-mail request to info@exchangetradedconcepts.com, or by asking any financial intermediary that offers shares of the Fund. The Fund's prospectus and statement of additional information, each dated March 30, 2026, as each may be amended or supplemented from time to time, are incorporated by reference into this summary prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The xETFs TSLA Daily Income ETF (the "Fund") seeks to provide investment results that, before fees and expenses, correspond generally to the total return of the common stock of Tesla, Inc. (Nasdaq: TSLA) ("TSLA"), while seeking to generate income through a daily synthetic covered call strategy.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses *(expenses that you pay each year as a percentage of the value of your investment)*	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[1]	0.00%
Acquired Fund Fees and Expenses[1]	0.00%
Total Annual Fund Operating Expenses	0.99%

[1] Based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	**3 Years**
$101	$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when shares of the Fund are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example above, affect the Fund's performance. Because the Fund is new, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that, under normal market conditions, seeks to achieve its investment objective by investing at least 80% of its total assets in cash or cash equivalent securities, such as U.S. Treasury securities and short duration fixed-income ETFs, and securities and financial instruments that provide exposure to TSLA. For purposes of compliance with this investment policy, derivative instruments (i.e., total return swaps and options contracts) will be valued at their notional value.

The Fund generally seeks to remain fully invested at all times in financial instruments that provide exposure to TSLA equal to the Fund's NAV, without regard to market conditions, trends or direction. The Fund seeks to achieve its primary investment objective by generally investing in one or more total return swaps designed to replicate the performance of TSLA. Generally, a total return swap is an agreement between two parties, pursuant to which one pays (and the other receives) an amount equal to the total return (including, typically, income and capital gains distributions, principal prepayment or credit losses) of an underlying reference asset in exchange for a regular payment, at a floating rate, at a fixed rate, or the total rate of return on another financial instrument. The Fund does not seek to rebalance its portfolio each day. In order to maintain exposure to TSLA that approximates the Fund's NAV, the Fund will adjust the notional exposure to the Fund's derivative instruments in response to changes in net assets, for example, in response to newly issued Creation Units or decreases from Creation Unit redemptions.

The Fund seeks to achieve its secondary investment objective of current income through the use of a synthetic covered call strategy that provides daily income from the sale of call options. In general, an option is a contract that gives the purchaser (holder) of the option, in return for a premium, the right to buy from (call) or sell to (put) the seller (writer) of the option the security underlying the option at a specified exercise price. For physically settled options, the writer of an option has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price (call) or to pay the exercise price upon delivery of the underlying security (put). For cash settled options, the writer of an option has the obligation upon exercise of the option to deliver cash equivalent to the difference between the strike price and the price of the underlying security. The Fund's option writing strategy is a form of leveraged investing. The Fund is required to post collateral to ensure its performance to the option buyer when writing options.

On a daily basis, the Fund will generally sell call options with an expiration of one week or less. The Fund will, at market open, or shortly thereafter, on every business day, sell call options that utilize TSLA as the underlying reference asset with a strike price "at-the-money" or "out-of-the-money" of the market open price of TSLA. Then, immediately prior to or at market close, on each business day, the Fund will buy back the options to close its position. The income realized, if any, by the Fund will be the difference between the premium received from the Fund's sold call option less the cost to purchase the call option at the close of trading for the day. The income generated by this strategy will be treated as short-term capital gains for federal income tax purposes. The Fund expects that it will generally sell call options with an underlying notional value of less than 25% of the Fund's NAV, although the Fund may vary this exposure at its discretion.

In a traditional covered call strategy, an investor (such as the Fund) sells a call option on a security it already owns. The Fund generally expects to achieve its exposure to TSLA through total return swaps, although the Fund may invest up to 25% of its net assets in the common stock of TSLA. Because the Fund may not own the security underlying the option contract (i.e., the common stock of TSLA), the Fund's strategy may be considered a "synthetic covered call strategy," whereby the Fund seeks to synthetically replicate 100% of the price movements of TSLA through the use of derivative instruments.

Through its use of derivative instruments on TSLA or purchasing shares of TSLA directly, the Fund seeks to gain exposure to the price movements experienced by TSLA on a one-to-one basis. However, the Fund's sale of call options to generate income will potentially limit the degree to which the Fund will participate in any gains on the notional amount of its short call exposure because the Fund will not participate in increases in value beyond the strike price of the option for that portion of the portfolio over the course of a business day. The Fund does not expect to maintain overnight exposure to sold call options, and the full NAV of the Fund's portfolio will be exposed to movement of TSLA overnight until options are sold the following business day. This strategy effectively converts a portion of the daily potential upside return of TSLA into current income. Additionally, to the extent that TSLA lost value on a given day, such loss will be offset to some degree by the premiums earned by the Fund on its sold call options. As a result, the Fund's overall strategy will limit the Fund's participation in gains in the stock price of TSLA beyond a certain point.

To implement the covered call options strategy, the Fund may sell exchange-traded options, over-the-counter option contracts and/or FLexible EXchange® options ("FLEX Options"). Traditional exchange-traded options have standardized terms, the reference asset, the strike price and expiration date. Exchange-listed options contracts are guaranteed for settlement by the Options Clearing Corporation ("OCC"). FLEX Options are a type of exchange-listed options contract with uniquely customizable terms that allow investors to customize key terms like type, strike price and expiration date that are standardized in a typical options contract. FLEX Options are also guaranteed for settlement by the OCC. Over-the-counter options contracts are not guaranteed for settlement and are subject to counterparty risk. The ability to terminate over-the-counter option positions is more limited than with exchange-traded option positions because the predominant market is the issuing broker rather than an exchange and may involve the risk that broker-dealers participating in such transactions will not fulfill their obligations.

The Fund intends to make weekly distribution payments to shareholders. A portion of these weekly distributions will likely be characterized as return of capital. Return of capital represents a return of a portion of a Fund shareholder's invested capital and is not the equivalent of dividend yield. Return of capital distributions will reduce an investor's cost basis and may result in higher capital gains upon sale.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to TSLA. As of the date of the Prospectus, TSLA is assigned to the electric and autonomous vehicle industry group.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act").

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment. There is no guarantee that the Fund will be successful in its attempt to pay weekly distributions or consistent exposure to TSLA. An investment in the Fund is not an investment in TSLA. The Fund's strategy will not capture all potential gains if TSLA's share price increases in value. The Fund's strategy is subject to all potential losses if TSLA's share price decreases in value, which may not be offset by premium income received by the Fund.

Additional Information on TSLA

Tesla, Inc. is an electric vehicle and energy generation and storage systems manufacturing company. As disclosed on its most recent Form 10-K filing dated December 31, 2025, TSLA's automotive division currently manufactures five different consumer vehicles and is in early stage production for additional vehicles. Additionally, TSLA offers home or small commercial application energy storage products that it sells directly to consumers or though channel partners, as well as retrofit solar energy systems to customers and channel partners. TSLA also offers financial services, including automotive leasing and/or loan financing arrangements for its vehicles, automotive insurance, and energy generation and storage financing. Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to TSLA.

Tesla, Inc. is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by Tesla, Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-34756 through the SEC's website at www.sec.gov. In addition, information regarding Tesla, Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding Tesla, Inc. from the publicly available documents described above. Neither the Fund, the Trust, the Adviser, the Sub-Adviser nor any affiliate has participated in the preparation of such documents. Neither the Fund, the Trust, the Adviser, the Sub-Adviser nor any affiliate makes any representation that such publicly available documents or any other publicly available information regarding Tesla, Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date of the prospectus (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of TSLA have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of, or failure to disclose, material future events concerning Tesla, Inc. could affect the value of the Fund's investments with respect to TSLA and therefore the value of the Fund. Lastly, neither the Fund, the Trust, the Adviser nor the Sub-Adviser, nor any of their respective affiliates, make any representations investors as to the performance of TSLA.

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. The principal risks affecting shareholders' investments in the Fund are set forth below.

Authorized Participant Concentration Risk. Only an authorized participant may engage in creation or redemption transactions directly with the Fund. A limited number of institutions act as authorized participants for the Fund. To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders and no other authorized participant steps forward to create or redeem, the Fund's shares may trade at a premium or discount (the difference between the market price of the Fund's shares and the Fund's net asset value) and possibly face delisting and the bid/ask spread (the difference between the price that someone is willing to pay for shares of the Fund at a specific point in time versus the price at which someone is willing to sell) on the Fund's shares may widen.

Common Stock Risk. Common stock holds the lowest priority in the capital structure of a company and, therefore, takes the largest share of the company's risk and its accompanying volatility. The value of the common stock held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or facts relating to specific companies in which the Fund invests.

Concentration Risk. The Fund is susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in investments that provide exposure to TSLA and the industry to which it is assigned.

Counterparty Risk. Fund transactions involving a counterparty are subject to the risk that the counterparty will not fulfill its obligation to the Fund. Counterparty risk may arise because of the counterparty's financial condition (i.e., financial difficulties, bankruptcy, or insolvency), market activities and developments, or other reasons, whether foreseen or not. A counterparty's inability to fulfill its obligation may result in significant financial loss to the Fund. The Fund may be unable to recover its investment from the counterparty or may obtain a limited recovery, and/or recovery may be delayed.

Covered Call Strategy Risk. A covered call strategy involves writing (selling) covered call options in return for the receipt of premiums. By employing this strategy, each Fund's upside participation is capped, meaning investors will not benefit from increases in the underlying reference asset above the exercise price of the options. However, investors remain exposed to the full downside risk, as the Fund continues to bear the risk of underlying reference asset price declines. The premiums received from the options may not be sufficient to offset any losses sustained from underlying reference asset price declines over time. In rapidly rising markets, the Fund may significantly underperform the underlying reference asset, as gains above the exercise price are forfeited. As a result, the risks associated with writing covered call options may be similar to the risks associated with writing put options. Exchanges may suspend the trading of options during periods of abnormal market volatility. Suspension of trading may mean that an option seller is unable to sell options at a time that may be desirable or advantageous to do so.

Current Market Conditions Risk. Current market conditions risk is the risk that a particular investment, or shares of the Fund in general, may fall in value due to current market conditions. U.S. regulators have proposed several changes to market and issuer regulations which would directly impact the Fund, and any regulatory changes could adversely impact the Fund's ability to achieve its investment strategies or make certain investments. Recent and potential future bank failures could result in disruption to the broader banking industry or markets generally and reduce confidence in financial institutions and the economy as a whole, which may also heighten market volatility and reduce liquidity. The ongoing adversarial political climate in the United States, as well as political and diplomatic events both domestic and abroad, have and may continue to have an adverse impact the U.S. regulatory landscape, markets and investor behavior, which could have a negative impact on the Fund's investments and operations. Other unexpected political, regulatory and diplomatic events within the U.S. and abroad may affect investor and consumer confidence and may adversely impact financial markets and the broader economy. For example, ongoing armed conflicts between Russia and Ukraine in Europe and among Israel, Hamas and other militant groups in the Middle East, have caused and could continue to cause significant market disruptions and volatility within the markets in Russia, Europe, the Middle East and the United States. The hostilities and sanctions resulting from those hostilities have and could continue to have a significant impact on certain Fund investments as well as Fund performance and liquidity. The economies of the United States and its trading partners, as well as the financial markets generally, may be adversely impacted by trade disputes and other matters. For example, the United States has imposed trade barriers and restrictions on China. In addition, the Chinese government is engaged in a longstanding dispute with Taiwan, continually threatening an invasion. If the political climate between the United States and China does not improve or continues to deteriorate, if China were to attempt invading Taiwan, or if other geopolitical conflicts develop or worsen, economies, markets and individual securities may be adversely affected, and the value of the Fund's assets may go down. The COVID-19 global pandemic, or any future public health crisis, and the ensuing policies enacted by governments and central banks have caused and may continue to cause significant volatility and uncertainty in global financial markets, negatively impacting global growth prospects. While vaccines have been developed, there is no guarantee that vaccines will be effective against emerging future variants of the disease. As this global pandemic illustrated, such events may affect certain geographic regions, countries, sectors and industries more significantly than others. Advancements in technology may also adversely impact markets and the overall performance of the Fund. For instance, the economy may be significantly impacted by the advanced development and increased regulation of artificial intelligence. These events, and any other future events, may adversely affect the prices and liquidity of the Fund's portfolio investments and could result in disruptions in the trading markets.

Cybersecurity Risk. The Fund is susceptible to operational risks through breaches in cyber security. A breach in cyber security refers to both intentional and unintentional events that may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity. Such events could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. Cyber security breaches may involve unauthorized access to the Fund's digital information systems through "hacking" or malicious software coding but may also result from outside attacks such as denial-of-service attacks through efforts to make network services unavailable to intended users. In addition, cyber security breaches of the issuers of securities in which the Fund invests or the Fund's third-party service providers, such as its administrator, transfer agent, custodian, or sub-adviser, as applicable, can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed, especially because the Fund does not directly control the cyber security systems of issuers or third-party service providers.

Derivatives Risk. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include: (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities. Derivative contracts ordinarily have leverage inherent in their terms. The low margin deposits normally required in trading derivatives, including futures contracts, permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify potential for gain or loss and, therefore, amplify the effects of market volatility on share price.

Distribution Tax Risk. The Fund currently expects to make distributions on a weekly basis. Such frequent distributions may expose investors to increased tax liabilities. However, these distributions may exceed the Fund's income and gains for the Fund's taxable year. Distributions in excess of the Fund's current and accumulated earnings and profits will be treated as a return of capital. A return of capital distribution generally will not be taxable currently but will reduce the shareholder's cost basis and will result in a higher capital gain or lower capital loss when those Fund Shares on which the distribution was received are sold. Once a Fund shareholder's cost basis is reduced to zero, further distributions will be treated as capital gain if the Fund shareholder holds Fund Shares as capital assets. Additionally, any capital returned through distributions will be distributed after payment of Fund fees and expenses. Because a portion of the Fund's distributions may consist of return of capital, the Fund may not be an appropriate investment for investors who do not want their principal investment in the Fund to decrease over time or who do not wish to receive return of capital in a given period. In the event that a shareholder purchases Fund Shares shortly before a distribution by the Fund, the entire distribution may be taxable to the shareholder even though a portion of the distribution effectively represents a return of the purchase price. The Fund may not be able to determine the Fund's current earnings and profits until the end of the taxable year, so initial characterizations of a distribution may change.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

Equity Securities Risk. The prices of equity securities in which the Fund invests may rise and fall daily. These price movements may result from factors affecting individual issuers, industries or the stock market as a whole.

Exchange-Traded Funds Risk. Through its investments in ETFs, the Fund is subject to the risks associated with the ETFs' investments, including the possibility that the value of the instruments held by an ETF could decrease. These risks include any combination of the risks described in this section. The Fund's exposure to a particular risk will be proportionate to the Fund's overall allocation and each ETF's asset allocation. In addition, by investing in the Fund, shareholders indirectly bear fees and expenses charged by the ETFs in addition to the Fund's direct fees and expenses. As a result, the cost of investing in the Fund may exceed the costs of investing directly in ETFs. The Fund may purchase ETFs at prices that exceed the net asset value of their underlying investments and may sell ETF investments at prices below such net asset value and will likely incur brokerage costs when it purchases and sells ETFs.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions may decline.

Liquidity Risk. The Fund may invest in securities that may trade in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund. The Fund's principal investment strategies are dependent upon the use of the Sub-Adviser's proprietary security selection process and, as a result, the Sub-Adviser's skill in understanding and utilizing such processes. The achievement of the investment objective of the Fund cannot be guaranteed and the Sub-Adviser's management of the Fund may not produce the intended results.

Market Maker Risk. The Fund faces numerous market trading risks, including the potential lack of an active market for Fund shares due to a limited number of market markers. Decisions by market makers or authorized participants to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. The Fund may rely on a small number of third-party market makers to provide a market for the purchase and sale of shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Fund's shares are trading on the Exchange, which could result in a decrease in value of the Fund's shares. This reduced effectiveness could result in Fund shares trading at a discount to net asset value and also in greater than normal intraday bid-ask spreads for Fund shares.

Market Risk. The market price of an investment could decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of an investment also may decline because of factors that affect a particular industry or industries such as labor shortages, increased production costs, and competitive conditions. Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the market generally and on specific investments. For example, in recent years, the COVID-19 pandemic, the large expansion of government deficits and debt as a result of government actions to mitigate the effects of the pandemic, Russia's invasion of Ukraine, and the rise of inflation have resulted in extreme volatility in the global economy and in global financial markets. Economies and financial markets throughout the world are becoming increasingly interconnected. As a result, whether or not the Fund invests in securities of issuers located in or with significant exposure to countries experiencing economic and financial difficulties, the value and liquidity of the Fund's investments may be negatively affected.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New/Smaller Fund Risk. A new or smaller fund is subject to the risk that its performance may not represent how the fund is expected to or may perform in the long term. In addition, new funds have limited operating histories for investors to evaluate and new and smaller funds may not attract sufficient assets to achieve investment and trading efficiencies. There can be no assurance that the Fund will achieve an economically viable size, in which case it could ultimately liquidate. The Fund may be liquidated by the Board of Trustees (the "Board") without a shareholder vote. In a liquidation, shareholders of the Fund will receive an amount equal to the Fund's NAV, after deducting the costs of liquidation, including the transaction costs of disposing of the Fund's portfolio investments. Receipt of a liquidation distribution may have negative tax consequences for shareholders. Additionally, during the Fund's liquidation all or a portion of the Fund's portfolio may be invested in a manner not consistent with its investment objective and investment policies.

Non-Diversification Risk. The Fund is non-diversified under the 1940 Act, meaning that, as compared to a diversified fund, it can invest a greater percentage of its assets in securities issued by or representing a small number of issuers. As a result, the performance of these issuers can have a substantial impact on the Fund's performance.

Operational Risk. The Fund and its service providers may experience disruptions that arise from human error, processing and communications errors, counterparty or third-party errors, technology or systems failures, any of which may have an adverse impact on the Fund. The Fund is also susceptible to operational risks through breaches in cyber security.

Options Risk. The use of options involves investment strategies and risks different from those associated with ordinary portfolio securities transactions and depends on the ability of the Fund's portfolio managers to forecast market movements correctly. The prices of options are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, or in interest or currency exchange rates, including the anticipated volatility, which in turn are affected by fiscal and monetary policies and by national and international political and economic events. As the seller (writer) of a call option, the Fund will lose money if the value of the reference index or security rises above the strike price and the buyer exercises the option; however, such loss will be partially offset by any premium received from the sale of the option. As the buyer of a call option, the buyer risks losing the entire premium invested in the option if the buyer does not exercise the option. The effective use of options also depends on the Fund's ability to terminate option positions at times deemed desirable to do so. There is no assurance that the Fund will be able to effect closing transactions at any particular time or at an acceptable price. In addition, there may at times be an imperfect correlation between the movement in values of options and their underlying securities and there may at times not be a liquid secondary market for certain options. Options may also involve the use of leverage, which could result in greater price volatility than other securities.

Portfolio Turnover Risk. The Fund's investment strategy may result in relatively high portfolio turnover, which may result in increased transaction costs and may lower Fund performance.

Premium/Discount Risk. The market price of the Fund's shares will generally fluctuate in accordance with changes in the Fund's net asset value as well as the relative supply of and demand for shares on the Exchange. The Fund's investment advisor cannot predict whether shares will trade below, at or above their net asset value because the shares trade on the Exchange at market prices and not at net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for shares will be closely related, but not identical, to the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. However, given that shares can only be purchased and redeemed in Creation Units, and only to and from broker-dealers and large institutional investors that have entered into participation agreements (unlike shares of closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their net asset value), the Fund's investment advisor believes that large discounts or premiums to the net asset value of shares should not be sustained. During stressed market conditions, the market for the Fund's shares may become less liquid in response to deteriorating liquidity in the market for the Fund's underlying portfolio holdings, which could in turn lead to differences between the market price of the Fund's shares and their net asset value and the bid/ask spread on the Fund's shares may widen.

Significant Exposure Risk. To the extent that the Fund invests a significant percentage of its assets in a single asset class or the securities of issuers within the same country, state, region, industry or sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. A significant exposure makes the Fund more susceptible to any single occurrence and may subject the Fund to greater market risk than a fund that is more broadly diversified.

Special Tax Risk. The Fund intends to qualify annually and to elect to be treated as a regulated investment company under the Internal Revenue Code of 1986, as amended (the "Code"). To qualify for the favorable U.S. federal income tax treatment generally accorded to regulated investment companies, the Fund must, among other things, (i) derive in each taxable year at least 90% of its gross income from dividends, interest, payments with respect to securities loans and gains from the sale or other disposition of stock, securities or foreign currencies or other income derived with respect to its business of investing in such stock, securities or currencies, or net income derived from interests in certain publicly traded partnerships; (ii) diversify its holdings so that, at the end of each quarter of the taxable year, (a) at least 50% of the market value of the Fund's assets is represented by cash and cash items (including receivables), U.S. government securities, the securities of other regulated investment companies and other securities, with such other securities of any one issuer generally limited for the purposes of this calculation to an amount not greater than 5% of the value of the Fund's total assets and not greater than 10% of the outstanding voting securities of such issuer, and (b) not more than 25% of the value of its total assets is invested in the securities (other than U.S. government securities or the securities of other regulated investment companies) of any one issuer, or two or more issuers which the Fund controls which are engaged in the same, similar or related trades or businesses, or the securities of one or more of certain publicly traded partnerships; and (iii) distribute at least 90% of its investment company taxable income (which includes, among other items, dividends, interest and net short-term capital gains in excess of net long-term capital losses) and at least 90% of its net tax-exempt interest income each taxable year. There are certain exceptions for failure to qualify if the failure is for reasonable cause or is de minimis, and certain corrective action is taken and certain tax payments are made by the Fund. As indicated elsewhere in this Prospectus, the Fund will use notional value for some assets in determining whether the Fund is complying with its investment strategy. For purposes of complying with the regulated investment company diversification rules, the Fund will use market value for securities for which market quotations are readily available and fair value for other securities.

The authority with regard to swaps entered into by regulated investment companies is unclear both as to the qualification under the income test and the identification of the issuer under the diversification test. The Fund intends to take the position that because the swaps held by the Fund reference securities that the income on the swaps are "other income" from the Fund's business of investing in stocks and securities. In addition, the Fund intends to manage its investments in the swaps so that neither the exposure to issuer of the referenced security nor the exposure to any one counterparty of the swaps will exceed 25% of the gross value of the Fund's portfolio at the end of any quarter.

If the Fund were to fail to meet the qualifying income test or asset diversification test and fail to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund's performance.

Sub-Adviser Risk. The Sub-Adviser is a newly created entity and has a limited operating history. As a result, the Sub-Adviser's ability to successfully implement investment strategies and manage the Fund may be subject to greater uncertainty than would be the case for a more established sub-adviser. There can be no assurance that the Sub-Adviser will be able to achieve the Fund's investment objectives or that its investment strategies will prove successful.

Swap Agreements Risk. The Fund will utilize swap agreements to derive its exposure to shares of TSLA. Swap agreements may involve greater risks than direct investment in securities as they may be leveraged and are subject to credit risk, counterparty risk and valuation risk. A swap agreement could result in losses if the underlying reference or asset does not perform as anticipated. In addition, many swaps trade over-the-counter and may be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.

*Trading Issues Risk***.** Trading in Fund shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable. In addition, trading in Fund shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange's "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. The Fund may have difficulty maintaining its listing on the Exchange in the event the Fund's assets are small, the Fund does not have enough shareholders, or if the Fund is unable to proceed with creation and/or redemption orders.

TSLA Investing Risks. The Fund will have significant exposure to TSLA through its investments in swap agreements that utilize TSLA as the reference asset. Accordingly, the Fund will subject to the risks of TSLA, set forth below.

*TSLA Issuer-Specific Risks. I*ssuer-specific attributes may cause an investment held by the Fund to be more volatile than the market generally. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole. As of the date of this prospectus, in addition to the risks associated with companies involved in the production of electric and autonomous vehicles as well as automotive companies, Tesla, Inc. faces risks associated with: potential delays in launching and scaling production of products and features; suppliers may be unable to delivery components according to schedule or at acceptable prices or volumes; projected construction timelines may be hard to predict; growing global sales, delivery and installation capabilities as well as increasing the global vehicle charging network may be difficult; maintaining and growing access to battery cells may be difficult; the future demand for electric vehicles is unpredictable; competition is increasing from a growing list of established and new competitors; issues with manufacturing lithium-ion cells or other components for its electric vehicles; the ability to maintain and expand international operations; products or features may contain defects or take longer than expect to be fully functional; product liability claims; maintaining public credibility and confidence for the long term, including the management of recalls and warranties; the potential for difficulties with growing or maintaining the various offered financing programs; managing ongoing obligations with the Research Foundation for the State University of New York relating to the Gigafactory New York; the ability to attract, hire and retain key employees or qualified personnel; being highly dependent on the services of Elon Musk, its Chief Executive Officer; system security and data protection breaches, including cyberattacks; the potential for union activities to cause disruptions; as well as other operational, regulatory, tax related and legal issues. Additionally, communications by Mr. Musk to the public may significantly impact the trading price of Tesla, Inc.'s common stock.

Electric and Autonomous Vehicle Risk. The electric and autonomous vehicle industries are in a phase of rapid technological innovation. Companies may face challenges in developing reliable, efficient, and cost-effective technologies, which could delay product rollouts or reduce competitiveness. The success of electric and autonomous vehicle companies is influenced by government policies, such as subsidies, tax incentives, emissions regulations, and autonomous driving laws. Changes or uncertainty in these policies may adversely impact the growth prospects of such companies. Electric and autonomous vehicle development requires significant upfront capital for research and development, production facilities, and infrastructure. Companies may face difficulties in securing adequate funding, particularly in volatile market conditions or periods of rising interest rates. In addition, electric and autonomous vehicle companies depend on the availability of raw materials, particularly for batteries (e.g., lithium, cobalt, nickel). Supply chain disruptions, geopolitical tensions, or material shortages could increase costs and hinder production. Consumer adoption of electric and autonomous vehicles depends on factors such as vehicle affordability, charging infrastructure availability, range anxiety, and consumer trust in autonomous driving technology. Slower-than-expected adoption could impact company revenues. Lastly, the market for electric and autonomous vehicles is highly competitive, with established automakers, startups, and technology companies vying for market share. Intense competition may lead to pricing pressure, reduced margins, or market consolidation.

Indirect Investment Risk. Tesla, Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of the Fund. The Trust, the Fund, the Adviser, the Sub-Adviser or any affiliate are not responsible for the performance of TSLA and make no representation as to the performance of TSLA. Investing in the Fund is not equivalent to investing in TSLA. Fund shareholders will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to TSLA.

Consumer Discretionary Companies Risk. The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, supply chains, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the consumer discretionary sector depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.

Large Capitalization Companies Risk. Large capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

United States Risk. Certain changes in the U.S. economy, such as when the U.S. economy weakens or when its financial markets decline, may have an adverse effect on the securities to which the Fund has exposure.

Upside Participation Risk. The Fund employs an investment strategy that includes the sale of call options contracts, which limits the degree to which the Fund will participate in increases in value experienced by TSLA. This means that if TSLA experiences an increase in value above the strike price of the sold call options, the Fund will likely not experience that increase to the same extent and may significantly underperform TSLA. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by TSLA, but has full exposure to any decreases in value experienced by TSLA, the NAV of the Fund may decrease over any given time period. The degree of participation in TSLA gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call options contracts and will vary over time. It is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of TSLA.

U.S. Government Securities Risk. U.S. government securities are subject to interest rate risk but generally do not involve the credit risks associated with investments in other types of debt securities. As a result, the yields available from U.S. government securities are generally lower than the yields available from other debt securities. U.S. government securities are guaranteed only as to the timely payment of interest and the payment of principal when held to maturity.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Performance Information

The Fund is new and therefore has no performance history. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by comparing the Fund's return to a broad measure of market performance.

Investment Advisers

Exchange Traded Concepts, LLC (the "Adviser") serves as the investment adviser to the Fund. WallStreetX ETFs, Inc. serves as the sub-adviser to the Fund.

Portfolio Managers

Johnny Wu, Chief Executive Officer of the Sub-Adviser, has served as a portfolio manager of the Fund since its inception in 2026.

Kenneth Wong, Chief Investment Officer of the Sub-Adviser, has served as a portfolio manager of the Fund since its inception in 2026.

Andrew Serowik, Co-Chief Executive Officer and Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2026.

Todd Alberico, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2026.

Gabriel Tan, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2026.

Brian Cooper, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in 2026.

Purchase and Sale of Fund Shares

The Fund issues shares to, and redeems shares from, certain institutional investors known as "Authorized Participants" (typically market makers or other broker-dealers) only in large blocks of shares known as "Creation Units." Creation Unit transactions for the Fund generally are conducted in exchange for the deposit or delivery of a portfolio of securities closely approximating the holdings of the Fund and a specified amount of cash.

Individual shares of the Fund may only be purchased and sold in the secondary market through a broker or dealer at a market price. The Fund's shares are listed on the Exchange. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The price of the Fund's shares is based on a market price and, because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at prices greater than NAV (premium) or less than NAV (discount).When buying or selling shares of the Fund in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) (the "bid-ask spread"). When available, recent information regarding the Fund's NAV, market price, premiums and discounts, and bid-ask spreads will be available at www.xETFs.com.

Tax Information

Distributions made by the Fund may be taxable as ordinary income, qualified dividend income, or long-term capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or individual retirement account ("IRA"). In that case, you may be taxed when you take a distribution from such account, depending on the type of account, the circumstances of your distribution, and other factors.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
