===== In this paper, we derive the new second-order finite-difference discretization scheme for the non-linear shallow water equations in the framework of LBM, which is numerically exact and possesses hyperbolic properties. We show the CFL condition that the maximal time step size depends on Δx , not on Δt and write the explicit formulas in the new discretization for the non-linear shallow water equations. We demonstrate the dispersion characteristics for the new discretization in section [S1] and analyze the stability properties of the new discretization for the non-linear shallow water equations in section [S2]. We compare the analytical solutions with numerical results and demonstrate that the solutions

by the new scheme are in accordance with the analytical solutions. [99]{ } G. A. Beasley, B.J. West, Nonlinear shallow water theory and its physical basis, Ocean Wave V., 26, 1995, pp. 171-184. P. B. Umbanhowar, B. Melgani,, Discrete and
