Astron is a Universal Windows Platform (UWP) app that lets you determine the brightness of the night sky. It provides you with all the information you need to set your gear and take pictures that will be exposed properly. You can also use Astron to check weather forecasts and see when it's best to go out and shoot the stars. Unlock all of the functionality of Astron with one of the following options: 1. Choose a UWP app that allows location sharing and is registered with the Windows AppLocker system. (Zooming is supported) 2. You can install Astron on any Windows 10 device. (Zooming is not supported) The data you need for the app includes the time, latitude, longitude, and altitude of your location. Selecting an object's position will also show you the declination and right ascension time, and it will provide you with detailed information about the selected object, including apparent magnitude, dimensions, and exposure time. Once you have selected an object, you can instantly calculate its exposure time. The app will also show you a preview of the object's dimensions. In addition, you can check weather forecasts for the selected time to make sure they are suitable for photographing. If you know an object's apparent magnitude and dimensions, you can instantly

---

calculate the exposure time. The app will also show you a preview of the object's dimensions. Calculate exposure time for any object you wish to photograph. If you have additional information (such as a star chart) you can view detailed information about the object in the form of a table, or as an image gallery. For more information, please visit [Description: Astron is a Universal Windows Platform \(UWP\) app that lets you determine the brightness of the night sky.
