Q: From a .so file how can I find out what function it contains? I have a .so library that I'm building using a makefile. How can I look inside the file to find out what the different functions in that file are? I have tried readelf but it just complains that I don't have Elf class code section support. A: Depends what you mean by "looking inside". In gcc/ld (and clang/llvm) there are predefined "symbols" (e.g. `__libc_start_main`, `__libc_csu_init`) that contains the functions that you will find in the library. You can check this out with `nm` or `objdump`. Another approach may be to use `otool` or `ldd` (I never used them, so I'm not sure).

1. Field of the Invention  
The present invention relates to electrophotographic apparatuses, such as laser printers, and more particularly, to an electrophotographic apparatus capable of improving continuity of a belt and a transfer roller.

2. Description of the Related Art  
In general, an electrophotographic apparatus forms an electrostatic latent image by selectively exposing a surface of a photoconductor using an exposure means, develops the electrostatic latent image using a developing means, and transfers a developed image onto a printing sheet using a transfer means. Here, a transfer operation is performed by the transfer means using a transfer roller (hereinafter, referred to as a transfer belt) supported by a belt supporting frame. For this, the transfer roller is formed of a highly elastic material, such as silicone rubber, and has

You are exploring the world of the Mindlanes. Known as hyperspace, this space is home to a few million species. The races range from mammals to klingons and from kobolds to klingons, but they all share a common set of laws. The primary one is, "Anything that can be done, will be done." If you have a task, you can imagine somebody making the task happen. The whole galaxy is a giant network of people who can do anything, and every race has its own set of tools for doing so. This universe is big enough that you can afford to pick and choose exactly what you want, or you can be like Terraform Inc. They are the largest, most well-connected and respected players in hyperspace. Terraform Inc purchases, modifies, and sells planets. They own large tracts of land as well as the tools necessary to complete the tasks. As they receive requests for planets, they modify what resources are necessary to make a good or service. If you are interested in using their services, your task is to travel to Terraform Inc's nearest branch (pretty much wherever you are, really), to meet with them and ask for a job. Features: - Construction by cartwheel - Landscan - Manage inventory through a high-level UI, and much more - Landplay with aspects like speed and angle, hand physics, and so on - Optional hovercraft - Stylized top-down map - Many different types of component per land - Import your own 3D models - Completion criteria met through the tick of a delivery - Import your own clothing - Rentable assets - Push notifications - PayPal support - Can use any event system - Steam, cool a game through a button, start a timer, and on and on. You might even see it pop-up in-game. If you're interested in more information, I've made a separate page for the FEATURES section, which covers all the places you can find more. ## **What's new:**

**: velociraptor Tag: Tomaz Sussman** For a long time, **Vexxed** was a little undefined in my mind. Back when i was a child, there was a time when i used to read K.A. Moebius. I would spend hours reading comics like **Gladiator** and **Les Bosh de Mémoire**. So when i was around 10 years old, i happened to read a novel by **Katsuhiro Otomo** titled **Mobius**. This is a bit unrelated to the story at hand, but just to give you an impression of who i am talking about. At that time, i bought an old PC, like my dad, and i spent countless hours reading that book. Those were the days when i learned how to read. It was like a study, this was the first novel that i ever read, and i loved it. Otomo is a writer from a different time. He presents a little something for a lot of people, he's actually an action manga and anime writer. History After **Mobius**, Otomo wrote another masterpiece called **AKIRA**. I read this manga too, for a good amount of time, but i've never managed to get bored. I still keep on reading Otomo's comedies, but the other manga he has made are still missing. The current manga series by Masamune Shirow known as **Ghost in the Shell** is a masterpiece. Written by a Frenchman inspired by Otomo, the manga is called **Vexxed** (what an irony). It's a mixture between **Jak and Daxter**, **System Shock** and **Doom**. Unfortunately, i haven't been able to see it live. I saw that damn thing on the Nintendo channel, and i felt really depressed when i asked myself why. Because i had been living that life, even if i never really lived. Being a **Ghost in the Shell** fan doesn't mean i hate videogames, but it's pretty scary. Remember the first time that they showed you a **Ghost in the Shell** movie? Some people hated it, but i knew. You know when you see those moments in a movie that "i know this!" Those are the moments when i realize that i've lived that way. That i was about to live again, even if i almost didn't. Now fast
