The proposed concept plan shows both ingress / egress locations on Ponderosa Farm Road too close together. Below is the fire code standard used to determine the distance between two access road ingress/egress locations.

International Fire Code 2024 Edition

D107.2 Remoteness.

Where two fire apparatus access roads are required, they shall be placed a distance apart equal to not less than one-half of the length of the maximum overall diagonal dimension of the property or area to be served, measured in a straight line between accesses.

The secondary fire access road cannot be installed because of location on the property, topography, waterways, nonnegotiable grades or other similar conditions. Per Fire Marshal Vieira the applicant can use the state adopted alternative to increase the road width to 26' the increased road width will eliminate the requirement for a secondary emergency access.
