

Introducing Pex Press F3347 Connections

- **F3347 connections** are Pex B style barbs with a **pre-installed stainless-steel sleeve** and tool locator ring. The stainless-steel sleeve comes equipped with **3 viewing windows** to ensure the pex pipe is completely inserted before pressing.
- **F3347 connections** can be **tested immediately**, regardless of environmental temperatures. This saves time and labor.
- **F3347 connections** are **factory assembled** for faster, more efficient installation. No more keeping track of multiple pieces for each connection.
- **F3347 connections** can be pressed with a **single tool**. Installer must use a Pex B stainless steel sleeve tool.
