

## Twist 'N Seal®

### Product Description and Features

The Test-Tite® Twist 'N Seal Pipe Seal Kit is a mechanical, internal pipe sealing device designed to temporarily stop water flow in pressurized supply lines during repair, soldering, or pipe fitting installation. Installed inside the pipe, the seal creates a positive mechanical barrier that allows work to be performed without draining the entire system.

The Twist 'N Seal Pipe Seal is rated to hold pressures up to 60 psig. Interchangeable rubber seals (sold separately) are available to accommodate multiple supply line pipe sizes. The system requires no additional tools, and seal changes are completed by simply unthreading and replacing the rubber element.

### Installation Instructions

To install, shut off the water supply and relieve system pressure. Thread the appropriately sized rubber seal onto the installation tool and adjust until it lightly fits inside the pipe. Insert the seal into the pipe with the handle positioned at 90 degrees. Rotate the handle to the straight (inline) position to expand the rubber element and create a secure seal against the pipe wall. For additional sealing pressure, return the handle to the 90-degree position, tighten the seal one full turn clockwise, and reposition the handle inline.

### Key Features

- Internal mechanical pipe sealing device for pressurized supply lines
- Designed for temporary shutoff during soldering or fitting installation
- Pressure rated up to 60 psig
- Interchangeable rubber seals for multiple pipe sizes
- Available individually or in kit configurations
- Self-contained installation tool — no additional tools required
- California Residents:
