# HINTS & TIPS

## MIXING COOL AND WARM TONES

- Work with the clients potential and let their personal features sparkle by combining cool and warm shades together. Set your client on a new stage with the creation of muted yet modern tone directions.
- Consider personal features and qualities of your clients and define these contrasts by checking the skin tone and eye color.
- To create an individual hair color for each client, work with contrast (i.e if your client has warm skin and eye color, a cool hair color result will look best).
- When mixing cool and warm shades together, remember due to tonal dominance equal parts may not create neutral results.

## KEEP IT COOL!

- Brown shades are not only very versatile but also highly relevant for the daily in-salon business.
- For clients who prefer the deep and cool beauty of browns consider adding the IGORA VIBRANCE Boosters 0-11 or 0-22. For the correct usage please refer to the table below.

## ACTIVATOR STRENGTH AND MIXING

Mixing Ratio	Activator Strength	Levels of Lift	Usage	Development Time
Mix 1:1	1.9%/6 Vol.	None	<ul style="list-style-type: none"><li>• Dual System Application: Refreshing mid-lengths and ends</li><li>• Pastel toning &amp; Neutralization</li><li>• Tone-on-tone services</li><li>• Coloring darker</li><li>• White hair blending up to 30%</li></ul>	5-20 min.
	4%/13 Vol.	Soft brightening (up to 1 level on light bases)	<ul style="list-style-type: none"><li>• Dual System Application: Refreshing mid – lengths and ends</li><li>• Maximum vibrancy with fashion shades</li><li>• White blending up to 70% with Natural Extra Shades</li></ul>
